A Way To Garden

A VIRTUAL GARDENING SERIES FROM NYT GARDEN WRITER **MARGARET ROACH**

Get an inside look at the thought process of three contemporary masters. Gardens aren't one-size-fits-all; each designer has his or her own often quite distinctive approach—their way of seeing, and of working.

Part 1 - Tuesday, June 30 -9:30 am Library Community Room

“Making the Garden Pivot: From Traditional to Ecological”

Leslie Needham shows how to up the garden's ecological vibrance while also adding more legibility (with tactics like establishing key focal points or creating thoughtfully placed paths and seating areas). And great news, she reassures us: There's no need to rip out everything; she'll show us how to make a “graceful pivot” to an ecologically enhanced landscape.

Part 2 - Tuesday, July 28 - 9:30am Library Community Room

“Lessons from the Fireflies: Ecological Prompts for Conservation Gardeners”

Preston Montague seeks to create habitat-focused gardens. To empower us to do so he distills the principles of conservation gardening and draws upon the knowledge bases of sustainable design and permaculture, offering us an expanded set of references to guide our decision-making process when building or refining our landscape

Part 3 -Tuesday, August 25, 9:30am Library Community Room

“Design-less Gardening:A Naturalistic Approach for a Low-Maintenance Landscape”

Dan Jaffe Wilder’s end goal is a beautiful but manageable low-maintenance landscape, and he calls his method for getting there “design-less gardening.” Dan takes his inspiration not from the traditional principles in the pages of landscape architecture texts, but from nature itself, and will teach us to read its clues.

\$20.00 Per Person includes all three lectures
(60 to 90 minutes each)
